Layer 4 — Application platforms (own the execution model)
Spin / SpinKube
FaaS handler model
wasmCloud
Distributed actors
Slight
WASI-cloud-core
Per-request instantiation — not comparable to long-running Docker containers
Layer 3 — Node provisioning (install shims onto K8s nodes)
KWasm operator
Helm chart, node annotation
Runtime class manager
SpinKube, lifecycle operator
Automates what you can also do manually with SSH + config edits
installs
Layer 2 — Containerd shims (RuntimeClass interface)
runwasi — Rust library, containerd subproject (all shims built on this)
shim-wasmedge-v1
shim-wasmtime-v1
shim-wasmer-v1
embeds
Layer 1 — Wasm runtimes (execute .wasm bytecode)
WasmEdge
CNCF Sandbox
Wasmtime
Bytecode Alliance
Wasmer
Commercial
WAMR
Intel, embedded
wazero
Go library only
wasm3
Interpreter only
wasmi
Rust interpreter
Gray = no containerd shim, no K8s path
Alternative path: crun/youki with Wasm support (OCI low-level runtimes, not shown — different architecture)
